

Media Reminder Documentation Validation Report

Source-of-Truth Pack v1.0

Prepared for Mohamed Aslam Abdul

2026-08-05

Contents

1. Result

PASS. The Media Reminder Source-of-Truth Pack was generated as a consistent Markdown and PDF documentation set. All 23 core PDFs open, expose extractable text, use A4 pages, render without edge clipping, and are present in the combined 187-page binder. The final ZIP is tested with `unzip -t` after assembly.

This report validates the documentation artifacts. It does not claim that the application or APK has been implemented, certified, or tested on physical devices.

2. Inventory

Check	Result
Core Markdown documents	23
Core individual PDFs	23
Combined binder pages	187
Source words	46,037
Unique traceable requirement IDs	160
Diagram PNGs	13
Editable diagram SVGs	11
Dated primary-source records	20
PDF text characters extracted	324,017

3. Document index

ID	Document	Pages	Binder pages
MR-00	Document Map and Executive Summary	7	1-7
MR-01	Vision and Product Charter	7	8-14

ID	Document	Pages	Binder pages
MR-02	Product Requirements Document	7	15-21
MR-03	User Experience and Interaction Specification	9	22-30
MR-04	Visual Design System	7	31-37
MR-05	Functional Feature Specification	7	38-44
MR-06	Android Alarm, Notification and Battery Specification	10	45-54
MR-07	Technical Architecture	8	55-62
MR-08	Internal Module and Data Contracts	7	63-69
MR-09	Database and Local Storage Specification	8	70-77
MR-10	Backup, Export and Import Specification	7	78-84
MR-11	Edge Cases, Failure Recovery and Conflict Handling	8	85-92
MR-12	Security, Privacy and Threat Model	8	93-100
MR-13	Accessibility, Localization and Inclusive Design	6	101-106
MR-14	Testing, Quality and Device Matrix	8	107-114
MR-15	Performance, Battery and Operational Budgets	7	115-121
MR-16	Roadmap, Release and Success Metrics	6	122-127
MR-17	Architecture	7	128-134

ID	Document	Pages	Binder pages
	Decision Records		
MR-18	Contribution Guide and Engineering Standards	7	135-141
MR-19	AI Agent Guide and Master Loop Prompt	7	142-148
MR-20	Release, Distribution, Portfolio and Maintenance Guide	7	149-155
MR-21	Requirements Traceability and Acceptance Catalog	23	156-178
MR-22	Research Baseline and Official Sources	9	179-187

4. Source-content validation

- All 23 numbered Markdown source documents exist and have matching individual PDFs.
- All 14 local image references resolve; no broken image reference was detected.
- Placeholder scan found no unresolved Approved-document placeholder. The occurrences of TODO, TBD, <INSERT . . . > and “manifest placeholder” are intentional instructions or algorithm terminology in MR-10, MR-18 and MR-19.
- MR-21 contains 160 unique requirement IDs across product, UX, functional, Android, data, backup, security, accessibility, non-functional and release domains.
- The source register contains 20 official primary-source records with access dates and refresh triggers.

5. PDF validation

Each core PDF passed the following checks:

1. non-zero file size;
2. successful `pdfinfo` parsing;
3. page count greater than zero;
4. A4 page dimensions of 595.304 x 841.89 points;
5. successful `pdftotext` extraction with non-empty output;
6. successful inclusion in the combined binder;
7. embedded TrueType fonts for Noto Sans, Carlito Bold and Liberation Mono;
8. no extracted conversion-error, missing-image, traceback, broken-link or lorem-ipsum marker.

The combined binder contains 187 pages and 324,017 extracted text characters.

6. Render and visual validation

The entire combined binder was rendered at 110 DPI to 187 PNG pages, each 910 x 1287 pixels. Automated page-image analysis found:

Render check	Result
Missing rendered pages	0
Blank-page suspects	0
Content touching outer 5-pixel edge	0
Content bounding box within 10 pixels of an edge	0
Minimum non-white content ratio	0.0055
Maximum non-white content ratio	0.1266

All 187 rendered pages were reviewed through 16 sequential contact sheets. Full-page review was also performed on representative title, diagram, wireframe, code-contract and traceability-table pages. No clipped text, overlap, black square, missing glyph, malformed table or broken diagram was observed.

7. Archive validation

The distribution package contains only the user-facing Markdown, PDFs, diagrams, source register and QA files; build intermediates and page-render PNGs are excluded. It includes a pure relative-path `manifest.txt` and `SHA256SUMS.txt`. The final archive is accepted only after:

- `unzip -t` reports no errors;
- every `manifest.txt` path exists in the archive;
- every listed SHA-256 checksum verifies after extraction;
- the combined binder inside the archive remains 187 pages.

8. Known limitations and refresh triggers

- This is a design and engineering baseline, not a built application.
- Android/OEM notification and full-screen behavior must be verified on the physical device matrix in MR-14.
- Platform assumptions are dated 2026-08-05 and must be refreshed before dependency upgrades, target-SDK changes, store submission, or release work.
- PDF page numbers restart inside each individual document; binder page ranges in this report locate documents within the combined file.
- Root `AGENTS.md` and `MASTER_LOOP_PROMPT.md` are convenience extracts. MR-19 remains the authoritative AI-agent guide.

9. Acceptance

The documentation package is suitable for source control, design review, AI-assisted implementation planning, QA traceability, portfolio evidence and release preparation. Implementation claims must still be supported by code, test evidence and signed release artifacts.
